

Mathematical Calculators

This form of training makes certain demands on the student. The student must not only to have extraordinary mathematical methods, not only have an intrinsic motivation for doing math, but in addition to everything, he must be a decent person. From our point of view, learning process four years pass in very close and informal contacts between teacher and student is not possible. Let's say softer, we we don't know how to teach such a student.

I would like to note the impact of math on science becoming a student. Almost immediately, the problems associated with the lists disappear (a reminder that all students receive the same tasks and complete them at different times), which becomes impossible to get good grades or advantages. the task is noted in a special magazine of acquaintances "plus"). Schoolboy self-esteem is formed to yourself as a budding scientist. Qualities such as decency (intelligence) are developing. Of course, except for math wonderful teachers of the school, and the environment in which the student is located.

After all that has been said, it is clear.

Learning in our class is very difficult. To find schoolchildren, we will have to go through the entire school year to record several thousand candidates. And it's not always easy explain to parents why we are not taking their child in the classroom. Though, if we see We are ready to help him in math schools.

What about the team? Firstly, it should be a group of professional mathematicians, like-minded people who have the same understanding.

pupils. Teams may arise disputes regarding the assessment of a particular situation. But in fundamental, basic issues, from our point of view, of this should not be. Otherwise, everything will drown in numerous disputes about the meaning of being. And there will be no time or effort left on the case.

Secondly, teachers should be able to communicate with the student in the psychological setting of the conversation between two colleagues. Studying process How we teach (technology of the pedagogical process) effective. Essentially becoming test or exam, or another reason for self-affirmation novice teacher.

visibility.

And the third. From the described techniques. Lecturer, accepted in your lesson the challenge is to create such a situation. (Psychologists call this a method developing discomfort.) Correct definition of the gap between requirements for the student, and school art. The teacher overstates the bar - the student

Hopelessness, inability to solve the problem;

underestimates - the student becomes bored, he stops growing professionally.
